

LinkWater Environment Policy

LinkWater

The Queensland Bulk Water Transport Authority

The Queensland Bulk Water Transport Authority, trading as LinkWater, is a Queensland Government Statutory Authority. LinkWater is responsible for the management, operation and maintenance of potable bulk water pipelines and related infrastructure throughout South East Queensland (SEQ).

LinkWater recognises that we play an important role in safeguarding and enhancing the quality of the environment and community where we operate, for the benefit of existing and future generations.

LinkWater aims to deliver sustainable potable bulk water transport services by striving to achieve the following objectives:

- minimising resource consumption including energy, water and materials
- prevention of pollution and resource degradation - minimising generation of waste and harmful discharges to air, waterways and land
- preservation of biological diversity and ecological integrity
- respecting cultural heritage.

LinkWater is committed to complying with environmental performance requirements set by relevant legislation, regulations, policies, standards and industry codes and we will strive to exceed them, where appropriate.

LinkWater will continually improve our environmental management practices through our Environmental Management System (ISO 14001:2004). The Management System provides a framework for setting measurable objectives, targets and programs aimed at meeting regulatory and aspirational environmental performance levels. It also provides a structure for reviewing and continually improving upon these objectives and ultimately our environmental performance.

Chief Executive Officer
Peter McManamon
